

## Steps to Install Poppler on Windows

### 1. Download Poppler for Windows:

- Go to the [Poppler for Windows page](#)
- Download the latest binary release.

### 2. Extract the Poppler Package:

- Extract the downloaded zip file to a location on your computer, e.g., C:\poppler.

### 3. Add Poppler to PATH:

- Open the Start Search, type in "env", and select "Edit the system environment variables".
- In the System Properties window, click on the "Environment Variables" button.
- In the Environment Variables window, find the Path variable in the "System variables" section, select it, and click "Edit".
- Click "New" and add the path to the bin directory of the extracted Poppler package, e.g., C:\poppler\bin.
- Click "OK" to close all the windows.

## Verify the Installation

To verify that Poppler is correctly installed and accessible from the command line:

1. Open a new Command Prompt window.
2. Type the following command and press Enter: **pdftoppm -h**

You should see a help message for the pdftoppm utility if everything is set up correctly.
